American Vault®

■ Overhead Delivery

The 700 Series Remote Transaction System Incorporates 4-$^1/_2$" tubing, and a unique sealing method to achieve commercial payload capacity and low impact delivery at both ends. Clear tubing is used for the vertical runs above the Customer and Teller Terminals, providing the teller enhanced visual contact with the customer.

■ Intelligent Control

The system features simplified but powerful commands. The teller commands are "Send", "Home", and "Recall before Delivery". The customer commands are "Send" and "Call"

■ Durable Construction

The 700 Series Terminals are constructed of durable powder coated aluminum and stainless steel components that provide a lasting and durable appearance.

■ Versatile Installation

The Teller Terminal may be suspended above or mounted directly on top of the counter. The small profile of the Customer Terminal allows it to be mounted on smaller islands allowing more drive-up lanes.
