781 SERIES COMMERCIAL TRANSACTION SYSTEM

■ Commercial Transport

The 781 Series Commercial Transport System (CTS) incorporates 8" tubing. Its unique sealing and carrier presentation design achieves a commercial payload capacity of 25 pounds, for side opening carriers, and 15 pounds, for removable captive carrier, and a unique sealing method to achieve commercial payload capacity and low impact delivery at both ends.

■ Intelligent Control

The system features simplified but powerful commands with easy-to-use physical buttons that provide longevity compared to touchscreen solutions. The teller commands are "Send", "Home", and "Recall before Delivery". The customer commands are "Send", and "Call".

■ Durable Construction

The 781 Series Terminals are constructed of durable powder coated aluminum and stainless-steel components that provide a lasting and durable appearance. Redundancy is built into components of the customer unit that allow for twice the operational runtime compared to competitors' equivalent products.

■ Carrier

The removable side opening carrier is constructed of extruded aluminum with internal space for a box of quarters. The carrier is removed from the unit using recessed folding handles at each end. This removable carrier can achieve a payload capacity of 25lbs. The captive carrier is a top loaded carrier that achieves a payload of 15lbs.
